Project Abstract Submission Form

Sec No - 8	Team No - 22	Project Title - Hostel & Mess Management System
-------------------	---------------------	--

• Abstract

The **Hostel & Mess Management System** is a database-driven application designed to efficiently manage hostel accommodation and mess-related activities in educational institutions. The system maintains student details, room allocation, hostel availability, attendance, fee payments, and room occupancy records. It reduces manual paperwork and provides an organized way to store, retrieve, and update hostel information. Administrators can easily manage student registrations, room assignments, complaints, and other hostel-related operations through a centralized database.

The system also manages **mess operations**, including student meal registrations, daily attendance, menu details, and mess fee records. Using **MySQL**, the system ensures secure and structured storage of data while supporting queries, reports, and efficient record management. Overall, the Hostel & Mess Management System improves accuracy, reduces administrative workload, avoids data duplication, and provides faster access to information, making hostel and mess administration more transparent and efficient.

• Team Details

Roll Number(s)	Name of the Student	Signature
2520030014	Dhanush chandra	
2520030250	Varshith Reddy	
2520030555	Pranav	

Frameworks / Platforms / Software Used

- **Frontend:** HTML, CSS, JavaScript
- **Backend:** Java / Spring Boot
- **Database:** MySQL
- **Database Tool:** MySQL Workbench
- **IDE:** IntelliJ IDEA / Eclipse
- **Operating System:** Windows
